

Key Facts

- Founded in 2010
- Based in Finsbury Square, London, with other major offices in Houston, New York, Geneva and Singapore.
- Large Enterprise specialising in over the counter energy physical and financial futures

The Client

OTC Europe LLP was founded in 2010, being OTC Global Holdings' first international office. Based in Finsbury Square, London, with other major offices in Houston, New York, Geneva and Singapore. Specialising in over-the-counter energy physical and financial futures & options including crude oil, gas oil, fuel, freight and middle distillates. Global Holdings has since become the largest independent institutional broker of commodities, covering physical and financial commodity instruments.

The Challenge

Having evolved the European operation from the London office over a near decade, space started to become quite limited. The business reached the challenge of acquiring new premises to permit continued growth.

During this time, it was also identified to modernise and refresh the back-office IT infrastructure.

OTC sought to increase the speed, reliability and security of its infrastructure during the relocation & refresh project.

The Solution

As OTC's long-term IT partner, Cloudscape were asked to provide planning and professional services support for the office IT relocation, meanwhile undertaking a refresh project to modernise the tech tools available to the team.

An office relocation of in excess of 100 members of staff required next-level planning. Our focus was to deliver the IT relocation with minimal disruption or downtime to the team by preparing as many of the IT & communication services at the new offices prior to the commencement of the move.

Our team delivered an end-to-end service covering needs such as cabling & WiFi infrastructure and server room relocation & build, down to desk by desk setup to get each user's IT back up and running before they moved themselves into the new office.
