## OB Oil Brokerage

Key Facts

- Provide a high-quality trusted broking service

- began in 1989 in a basement office under a dry cleaners in Belgravia, London

- The focus on oil broking remains undiminished and undiluted despite the growth of the company.

The Client

Oil Brokerage Limited is an interdealer broker of oil and refined products and the associated hedging instruments, its global IT and telecommunications infrastructure is key to the business with any downtime having direct and significant cost to the company.
The goal of the company has always been straightforward: to provide a high-quality trusted broking service to the oil trading community with a personal touch.

The Challenge

Oil Brokerage Limited being a global company, faces distinctive tasks that aren't always in one set place.

The task in question was an office merge in Singapore, two offices that required integration into a single space, for up to 50 members of staff.

Given the complexity of the objective, with networking and certain infrastructures, it required careful and precise planning to allow the merge to be as smooth as possible.

The Solution

Cloudscape were asked to provide planning and professional services support for the office setup that was taking place in Singapore.

With a precise and thorough strategy in place, we took aim at uniting the two offices with exactitude and accuracy. The infrastructure in both locations is interlinked, if there had been issues during either move then the whole company would have been impacted.

It was testament to the preparation and planning undertaken that no problems were experienced during the course of the merge, a seamless transition was the key to a successfully procedure.

Our team delivered a complete service, planning a complete network design, including a comms room, network cabling and local and wide area networks.
A complicated procedure that required an intricate level of detail and planning to enable Oil Brokerage Limited to get the most out of the network and IT infrastructure.

We were also responsible for project managing the technology move with third-party technology suppliers in both Singapore and London.
